

 How do I submit a sample?

 Please fill out a Sample Submission Form for your sample type. It is imperative that the form be included, faxed, or emailed with the sample in order to begin testing.

Sample entry and analysis will not begin until a completed Sample Submission Form is received.

 How do I prepare my sample for shipment?

 All pesticide and herbicide samples must be frozen. Please send samples on dry ice or ship overnight with ice packs. Other sample types are not required to be frozen.

Be careful to make sure that each bag/container of sample is well sealed to prevent cross contamination from occurring.

High juice level fruit and vegetables, as well as liquids, require extra attention as they may leak.
